

JOB MARKET PROJECT

Business Problem

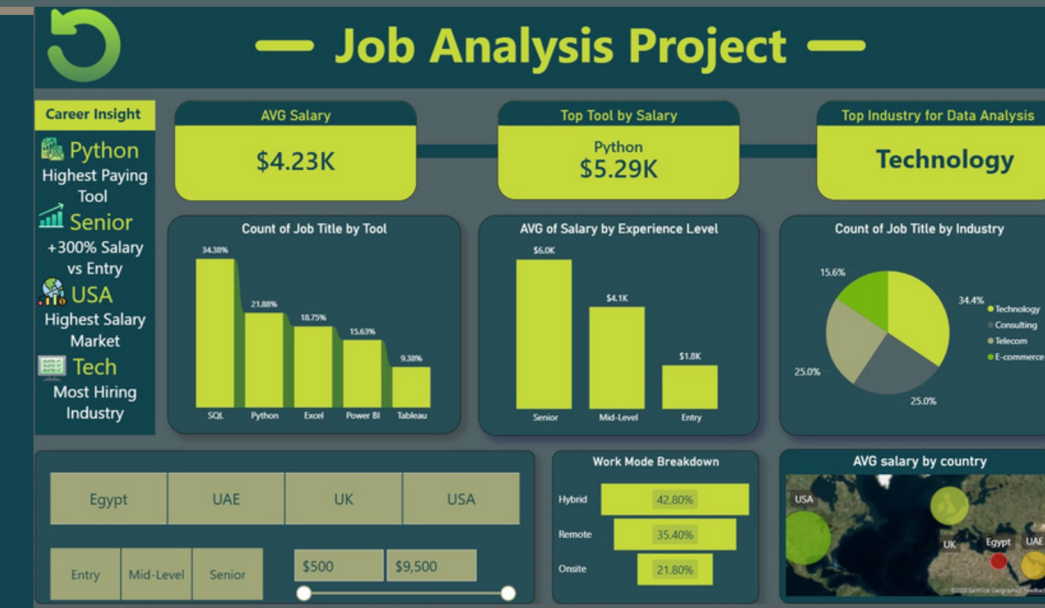

Aspiring analysts and professionals often lack visibility into:

- Most demanded tools
- Highest-paying skills
- Industries with highest demand
- Salary expectations

The goal was to create a data-driven overview of the analytics job market.

Tools Used

- Excel
- power BI

KPIs

- Average Salary
- Most Demanded Skills
- Highest Paying Skills
- Industry Demand
- Job Distribution

Recommendations

- Focus on mastering SQL and Python due to high demand and salary impact
 - Target opportunities in the technology sector
 - Continue developing dashboard and visualization skills
 - Build projects aligned with market requirements
- 

Business Impact

The analysis helped identify career trends and skill priorities, supporting better learning and career planning decisions.
